1. Recruit 10-15 participants
2. Present consent statement
    - You are invited to participate in a research study about user experience with AI customer service agents. The study will take about 30 minutes. Participation is voluntary, and you may stop and/or withdraw your data at any time. We will collect your responses, interaction logs, and demographic information. Your responses and chat logs will be stored in encrypted form where only the research team will have access. Data will be anonymized, and any identifying information you provide accidentally will be removed. De-identified data and code may be shared publicly. If you have any questions, please contact jgcheng@unc.edu. By continuing, you indicate consent to participate.
3. Present demographic questionnaire
4. Run `randomize.py` to randomize the order of chatbots and scenarios
5. Present instructions
    - For each of the following scenarios, you will roleplay as a customer contacting customer service about a specific issue. Feel free to fabricate details or pretend you have done certain actions as part of roleplaying. For instance, if the customer service agent tells you to restart your computer, you can respond saying that you have done so and whether it worked. Interact with the customer service chatbot until you feel that your issue is either adequately addressed or unable to be solved by the chatbot. Then, let me know that you are done.
6. Present the 1st scenario and chatbot
7. Present UX questionnaire
8. Repeat steps 7 and 8 for each scenario and chatbot
9. Present ending questionnaire
10. Present debrief
    - This is the end of the study. The customer service chatbots you interacted with were 4 different chatbot versions. One was a regular customer service chatbot, one was empathetic, one used informal language, and one both was empathetic and used informal language. The goal is to understand how these humanization techniques affect user experience with AI customer service chatbots. We truly appreciate the time you have taken to participate in our study, and if you have any questions, please contact jgcheng@unc.edu.
